### Social Services Care Plan

#### Focus

- Baseline – Resident currently has no in-person family visits and limited interaction with others

#### Goal

- Resident will have emotional needs met

#### Approaches

- All Staff monitor for signs resident may be distressed or need reassurance regarding what is going on
- All staff assist resident with maintaining contact with family/friends through means such as phone calls, Skype, cards, letters
- Set possible times with family on when contact will be made
- 1:1 visits will occur if resident begins showing signs of agitation, frustration and sadness over current situation. Staff to offer support, reassurance, comfort
- Options of ways to help resident: hymn singing, praying, beverages
- Social services continue to monitor for changing mood state
- If resident continues to show signs of distress – stay in contact with family – talk to IDT on ways to improve mood (In this case, would need to write a care plan specific to behavior)
- Monitor for changes in eating and drinking habits.
- Additional Approaches: \_\_\_\_\_
